DETAILED ACTION

1. This action is responsive to the communication filed 02/05/2009.

Reasons for Allowance

2. Claims 1-5, 7-9, and 11-15, hereinafter referred to as claims 1-13 are allowed.
3. The Examiner has found that the prior art of record does not render obvious the claimed limitations in combination with the specific added limitations as recited in independent claims and subsequent dependent claims.

One such prior art of record is a U.S. Patent No. 7,228,129 to Ward teaches a system for remote monitoring and control of remotely located equipment that minimizes wireless airtime includes an interface device coupled with the remote equipment. The interface device selectively communicates over a wireless network with a central server and/or a user device. Wireless communication with the interface device is field configurable by a user to be selectively triggered base on user specified operational conditions. Communication by the interface device may be with one of a first protocol and a second protocol based on user specified operating conditions to optimize wireless airtime. The first protocol includes a user configured data string to select information to be transmitted based on the user specified operating conditions. The second protocol includes a user configurable datafile selectively transmitted over a voice channel of the wireless network based on the user specified operating conditions. Messages communicated with the first and second protocol may be selectively utilized to generate an alert message to the user device based on a user configured message profile.

However, the prior art of record provides no rationale individually the limitation of at least “A method of determining which types of status information to extract from a monitored device by a monitoring device with a plurality of communication protocols communicatively coupled to a network with a plurality of communication protocols comprising: selecting, with the monitoring device, a communication protocol among the plurality of communication protocols used to extract status information from the monitored device; retrieving, with the monitoring device from a first memory, an information associated with the selected communication protocol, wherein the information associated with the selected communication protocol includes at least a type of status information, a weight of the status information, and information for extracting the type of status information from the monitored device using the selected communication protocol, wherein the weight of the status information indicates a relative informative value of the status information with respect to status information of a same type extracted using another of the plurality of communication protocols; determining, with the monitoring device if the type of status information is present in a second memory, wherein the second memory comprises status information previously extracted from the monitored device through a second protocol; if the determining step determines that the type of status information is present in the second memory, checking, with the monitoring device, whether the weight of the status information stored in the information associated with the selected communication protocol is greater than a corresponding weight associated with the status information of the same type stored in the second memory;”, as in claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
